TopSeal

Shower panel installation

TopSeal is a new colour matched adhesive and sealant for shower panels in bathrooms. It is the latest generation, high performance, toughened polymer technology. TopSeal's excellent bond strength gives instant grip without support, there's no slip and it has gap filling properties. Ideal for sealing tongue and groove joints.

It is specially designed to adhere to most building surfaces, including concrete, plaster, plasterboard, wood, plastics and metal.

TopSeal replaces slower, weaker silicone which often requires additional hot melt glue or adhesive tape while curing.

For a 1200mm panel, approximately one cartridge is required. Use it to fix the panel in place and then to seal between panels.

As TopSeal is colour matched to each board, the sealant provides a neat and inconspicuous join.

Once cured, TopSeal provides a 100% waterproof seal and is resistant to temperature extremes of -40°C to +100°C.

Kitchen splashback and upstand installation

TopSeal is also perfect for use in kitchen installations. It is a high strength, waterproof sealant and is flexible once cured.

TopSeal can be used to fix splashbacks and upstands in place, then used as a sealant bead between worktop and panel.

With its easy application and minimal shrinkage, TopSeal can be applied to a variety of surfaces, such as Quartz, Laminate, Stainless Steel and glass.

For further information regarding TopSeal, please contact a member of our sales team via email (sales@rearo.co.uk) or alternatively phone 0141 440 0800.
